

柔性防火电缆 Flexible fireproof cable

※产品简介 Brief product introduction

由于一般的电线电缆的绝缘使用的都是有机高分子材料，因此在火焰条件下极易碳化而失去绝缘作用。

柔性合成矿物绝缘防火电缆的绝缘采用合成矿物材料，在制造和施工使用时保持了电缆的柔软度。当火灾发生时，质变为坚硬的陶瓷状硬壳，以起到防火隔热的作用。并且其外护层采用制成螺纹状的非磁性不锈钢材料，保持了电缆原有的柔软弯曲度。

增加了防火等级，在保证施工防刮损、使用防鼠咬的同时，更可以帮助使用中的电缆散热。

这些材料一般都具有 1400℃以上的较高熔点，因此即使在 1050℃高温条件下防火电缆也能正常发挥输电功能，且能通过 BS 6387 C/W/Z 试验，是一种真正意义上的防火电缆。

The general use of wire and cable insulation are organic polymer materials, therefore under fire conditions easily carbonation and lose the function of insulation.

Insulation used synthetic mineral materials of flexible synthetic mineral insulation fireproof cables, used in the manufacture and construction keep cable softness. When the fire occurs, qualitative hard ceramic crust, to play the role of fire insulation. And the outer protective layer non-magnetic stainless steel material whorled, flexible cable bending maintained the original. Increased fire rating, in ensuring the construction of anti scratch, using anti rat bite at the same time, can help the cable heat in use.

These materials generally have a high melting point above 1400 DEG C, so even at 1050 DEG C under the condition of high temperature fireproof cable can play a normal transmission function, and can pass the BS6387C/W/Z test, is a real sense of fireproof cable.

※RFTGB系列防火电缆特点 RFTGB series of fire retardant cable

Bs6387耐火性能 Bs6387 refractory performance

- RFTGB 系列防火电缆通过 BS 6387 耐火标准三项考核：
 - 9500℃火焰下持续通电 180min 不击穿；
 - 6500℃火焰下 15min 后承受 15min 的水喷淋不击穿；
 - 9500℃火焰下承受 15min 的敲击振动而不击穿。

RFTGB series, fire retardant cable through BS6387 refractory three assessment criteria: , 9500°C flame under continuous electricity 180 min not breakdown; Under 6500 °C flame, 15 min after 15 min under water spray not breakdown; , under the pounding of 15 min vibration under 9500 °C flame without breakdown.

核心技术, 柔性合成矿物绝缘材料

The core patented technology, flexible synthetic mineral insulating materials

RFTGB 系列防火电缆采用以硅橡胶为基材加入氧化镁、氧化铝、瓷化粉等材料组合而成的核心技术，当遇火焰侵袭时。柔性合 成矿物绝缘材料在燃烧反应的热作用下，温度达到、超过 650 ℃时会逐渐形成陶瓷状结晶，能保持其绝缘性、增强防火特性。从而使电缆在一定的燃烧时间内能够保持继续通电。

RFTGB series, fire retardant cable with silicone rubber as base material add magnesium oxide, alumina, porcelain powder materials such as combination of core technology, when in the flame. Flexible synthetic mineral insulating material under the effect of combustion reaction heat, the temperature reached more than 650 °C, will gradually formed ceramic crystal, can maintain the insulation, fire protection features. To keep the cables in a certain burning time can continue to live.

生产工艺先进, 结构柔, 安装方便, 无接头更安全

advanced production technology, flexible structure, convenient installation, no joint safer

RFTGB 系列防火电缆采用成熟的绞线紧压技术，制造长度与普通电缆相同，在保证导体光洁、圆整的基础上，提高电缆柔；弯曲半径仅为 7D，安装像普通电缆一样，无需专门的技术设备；可以根据客户要求的长度、芯数进行供货，安装方便无接头，

RFTGB series, fire retardant cable USES the mature of the winding compression technology, and the length of the cable is the same, on the basis of the guarantee conductor is bright and clean, roundness, and improve the flexible cable; Bending radius is only 7 d, like ordinary cable installation, no specialized technical equipment; Can supply according to customer request length, some conclusions, easy installation, without connectors to eliminate the safety hidden trouble, can improve the reliability.

杜绝了安全隐患，提高了可靠性！

规格范围广 wide range of specifications

· RFTGB 系列防火电缆单芯截面最大可以做到 630mm^2 , 多芯结构中的单芯最大截面积可做到 300mm^2 , 可以满足各种规格建筑电线电缆需求。

耐压等级高 High Voltage level

· RFTGB 系列防火电缆耐电压等级为 1000 伏, 符合现代建筑电气设计, 大大延长了使用寿命, 而 BTTZ 电缆耐电压能力最多达 750 伏, 很难承受变频与电感因素形成的冲击电压, 很难符合现代设计的安全要求。

防水性能好 Good water proof performance

· RFTGB 系列防火电缆绝缘耐火层为柔性矿物, 防水性能好, 非磁性不锈钢连续成型工艺, 制成螺纹状外护层, 中间无接头, 杜绝了接头处进水的现象, 即使将 RFTGB 系列防火电缆完全浸在水中, 也可以正常运行。

机械强度高、防鼠咬 High mechanical strength, and rat bite

· RFTGB 系列防火电缆外护层采用非磁性不锈钢材料制成螺纹状, 能保证施工防刮损和使用时防鼠咬。

抗过载 Anti overload

· RFTGB 系列防火电缆绝缘层遇高温能迅速形成坚硬的壳体保护, 在承载超载、超负荷、短路电流致导体熔断 (1083C) 过程中, 不短路、不起火, 即使导体短路形成的铜液也不会流出, 杜绝了因过载而出现的电气故障, 更不会出现火情。

载流量 Load flow

· 与其他相同截面电缆相比, RFTGB 系列防火电缆采用不锈钢螺纹护套, 更有利于热量的散发, 比其他类型的电缆传输更高的电流。若额定电流相同, 则线损要比其他电缆小 $7\% \sim 10\%$ 。

耐腐蚀 Corrosion resistance

· RFTGB 系列防火电缆主要采用无机化合物材料, 外护层采用不锈钢材料制作, 对碱溶液及大部分有机酸和无机酸具有良好的耐腐蚀能力, 一般敷设时无需附加保护措施。
· 即使使用环境为化学品腐蚀或工业污染严重的地方, 可选用带有聚烯烃护套产品, 仍然可以保证使用安全。

使用寿命长, 节能环保 Long service life, energy saving and environmental protection

· RFTGB 系列防火电缆由无机物组成, 具有极好的热、电稳定性, 耐老化性要比有机(橡塑之类)材质高多倍。橡塑电缆一般使用寿命 15 到 20 年而无机绝缘电缆使用寿命 ≥ 50 年,
· 可适用于核电等领域, 无污染、绿色环保。

RFTGB series, fire can do 630 was largest, single core cable section multiconductor structure of single core area biggest can do 300 was, can satisfy the requirements of all kinds of wire and cable.

RFTGB series, fire retardant cable resistance voltage is 1000 v, in line with the modern building electrical design, greatly extend the service life, and ability to withstand voltage BTTZ cable up to 750 v, it is hard to withstand voltage variable frequency and the impact of the inductive factors forming, it is difficult to meet safety requirements of modern design.

RFTGB series fireproof cable insulating refractory layer is a flexible mineral, good waterproof performance, forming process of continuous non magnetic stainless steel, made of thread shaped outer protective layer, the middle without joints, prevent joint water phenomenon, even if the RFTGB series fireproof cable is completely immersed in the water, also can be in normal operation.

RFTGB series fireproof cable outer sheath non-magnetic stainless steel material thread shape, can guarantee the construction of anti scratch and when using anti rat bite.

RFTGB series fire retardant cable insulation layer when the temperature can quickly form shell protection hard, on the bearing overload, overload, short circuit current caused by conductor fuse (1083 DEG C) process, not short, not fire, even if the liquid copper conductor short circuit formation does not flow out, put an end to the electrical fault caused by overload, nor will there be a fire.

And the same with the other section cable compared, RFTGB series fireproof cable adopts stainless steel thread sheath, emit more conducive to heat, electric current is higher than other types of cable transmission. If the rated current of the same, then the loss than other cable $7\% \sim 10\%$.

RFTGB series fireproof cable mainly adopts the material of inorganic compounds, the outer protective layer is made of stainless steel material, has good corrosion resistance ability of the alkali solution and most organic and inorganic acid, without the need for additional protection measures generally laying.

And even if the use of the environment to chemical corrosion or industrial polluted place, can choose with polyolefin sheath products, can still guarantee the use safety.

RFTGB 系列防火电缆

RFTGB series fireproof cable by inorganic material, has excellent thermal, electrical stability, aging resistance than organic (rubber like material of high times). Rubber and plastic cable general service life of 15 to 20 years and mineral insulated cable service life more than 50 years,
And can be applied to nuclear power and other fields, no pollution, green environmental protection.

※应用领域——更广阔的应用空间

Application Field--Broader Application Space

柔性合成矿物绝缘防火电缆的设计体现了矿物绝缘技术的优势，该电缆不仅可用于高密度电流系统等方面，还广泛应用于消防报警及紧急救生防火系统。

Design of flexible synthetic mineral insulation fireproof cable reflects mineral insulation technology advantages, the cable can be used not only in high density electric system etc., are widely used in fire alarm and emergency rescue of fire protection system.

高层建筑 High rise building

高层建筑内的紧急线路和消防报警提示线路是火灾中最重要的线路，必须保持完整以延长并确定救灾时间。

Emergency line in high-rise buildings and fire alarm cue circuit is the most important in the line of fire, must maintain the integrity and determine the time to extend relief.

军事科学 Military Science

其独特的小尺寸和柔韧性可满足军事设备里狭窄的电缆空间，并能在线路的密封性、防辐射、防爆方面提供独特的解决方案。

Its unique small size and flexibility of the cable can meet the narrow space of military equipment, and provide unique solutions in line sealing, anti radiation, anti explosion.

石油化工 Petroleum and chemical industry

该电缆可耐 1050 °C 的高温，在火灾环境下能确保所有能源、控制阀的控制线路和紧急设备线路的完整，以防止灾情扩大。

The cable can be high temperature of 1050 DEG C, can ensure that all energy, control valve control circuit and the circuit integrity of emergency equipment in the fire environment, in order to prevent the disaster to expand.

电力、冶金应用 Military Science

柔性合成矿物绝缘电缆由化合物组成，可避免持续高温环境下普通电缆的老化、脆化和过早损坏，确保系统的完整。

Composed by the compound flexible synthetic mineral insulated cable, can avoid the common cable continued under the environment of high temperature aging, brittleness and premature failure, to ensure system integrity.

商场、剧院、宾馆 Shopping malls, theaters, hotels

在普通照明、应急照明、动力系统、安全系统、主干线等方面均可应用。

Can be used in general lighting, emergency lighting, power system, security system, the main trunk line etc..

机场应用 Airport application

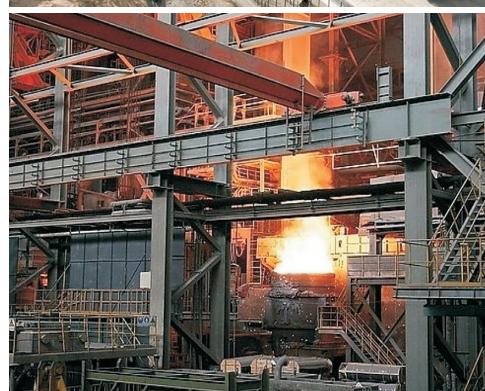

可应用于消防泵输送电路、紧急设备、普通照明、应急照明、消防报警系统、动力系统、CCTV 系统等。

Can be used in fire pump delivery circuit, emergency equipment, general lighting, emergency lighting, fire alarm system, power system, CCTV system etc..

古建筑 Ancient Architectural Buildings

火灾保护对古建筑而言是首要考虑的，柔性合成矿物绝缘电缆可在火灾前、火灾中、火灾后保证紧急线路的供电并提供独特的解决方案。

Fire protection is the primary consideration in ancient architecture, in the fire before the fire, fire, later to ensure power supply emergency line and provide unique solutions of flexible synthetic mineral insulated cable.

医疗设施 Medical facilities

柔性合成矿物绝缘电缆为紧急供电线路场所提供了安全保障，为人员的安全疏散赢得了时间，并为救生、救火系统的运作提供电力。

To provide for the security of the emergency power supply line place flexible synthetic mineral insulated cable, won time for evacuation, and provide power for life-saving, fire-fighting system operation.

隧道 Tunnel

可应用于普通照明、应急照明、抽排烟系统、保安值班室。

Can be applied to general lighting, emergency lighting, smoke exhaust system, security duty room.

应急和必要的公共设施 The emergency and necessity of public facilities

可应用于火灾报警、排烟系统、报警系统、CCTV 系统、应急照明、喷淋控制系统、救生扶梯、火灾电话、应急电源等。

Can be applied to the fire alarm, smoke extraction system, alarm system, CCTV system, emergency lighting, sprinkler system, fire rescue escalator, phone, emergency power supply.

※防火电缆中间接头

Fire retardant cable joint in the middle

产品简介 Brief product introduction

防火电缆中间接头导体采用中间连接管连接，采用柔性的合成矿物材料绝缘，使每相隔开，防止碰相，并阻止了水向中间连接管内导体渗透。

最后将防火电缆外罩用矿物绝缘块填满，将固定好的接头压入防火电缆外罩内用螺丝将其固定，使其起到防火、防水的效果。

Fire retardant cable intermediate joint conductor connected by the intermediate connecting pipe, use knead synthetic mineral insulating material, so that each of the separate, prevent touch phase, and prevent the water to permeate intermediate connecting pipe conductor.

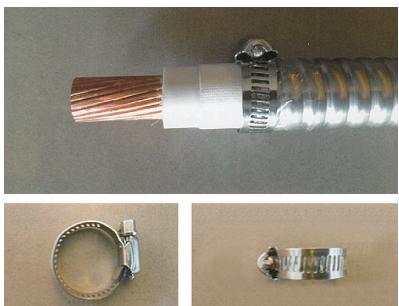

Finally will fire cable cover with mineral insulated filled with press fixed good joint into fire cable cover while use screws to fix it, make its have the fire prevention, waterproof effect.

※防火电缆分接箱 Fire retardant cable connection box

产品简介 Brief product introduction

- 树干式配电能节约大量投资
- 树干式配电宜采用单芯或多芯电缆便于分支
- 本公司电缆分支时，主干电缆不会断开
- 使用分支箱时，主干电缆不能敷设在线槽或桥架中，应直敷在支架上，因为线槽、桥架空间有限，很难装入分支箱，直接敷设在支架上，时符合规定的。

- The trunk type distribution can save a lot of investment
- The trunk type distribution appropriate USES single-core or multi-core cable branch
- The company cable branch, main cable will not disconnect
- When using branch box, trunk cable online slot or bridge can't, should apply straight on the stand, because of the trough, bridge space is limited, it is difficult to load branch box, laying on the scaffolds directly, in conformity with the provisions.

技术参数 Technical parameters

分接箱型号 Tap box type	A (mm)	B (mm)	C (mm)	适用于电缆外径 Applicable to the cable diameter
RFFZX-1	600	400	280	≤ 90
RFFZX-2	510	350	260	≤ 50
RFFZX-3	480	310	240	≤ 30
